

Gary Holden Schneider

Network Administrator · Cybersecurity Student · Security Author

I don't just study security — I build it.

01 About

Cybersecurity student at **Oklahoma State University – Oklahoma City** and a working **network administrator** managing enterprise-scale infrastructure across hundreds of endpoints. **CompTIA Tech+** and **A+** certified, with **Security+** in progress.

What sets me apart is that I build. I'm the sole developer of a **~92,000-line open-source AI security-education platform**, the author of a multi-volume security textbook spanning **~143,000 words**, and the maintainer of a growing public GitHub portfolio. A strong foundation in systems administration, networking, and Linux — paired with hands-on security automation, scripting, and offensive-security tooling — all pointed at a career in **offensive security**.

02 Certifications & Credentials

CompTIA Tech+

Certified Dec 10, 2025

ID · COMP001022949379

● ACTIVE · [verify.comptia.org](https://www.comptia.org)

CompTIA A+

Hardware, OS & troubleshooting

● CERTIFIED

ERRORS-Ultimate FLAGSHIP

[/ERRORS-Ultimate](#)

Sole developer of a **~92,000-line, MIT-licensed** security-education platform that teaches through a conversational AI mentor. A FastAPI + WebSocket backend runs a local LLM and a ChromaDB retrieval layer **entirely offline** on a Raspberry Pi 5 cyberdeck — with guided missions, an XP-based operator progression system, and a per-execution ethics/authorization gate that keeps all activity legal and lab-scoped.

Python FastAPI WebSockets Ollama / Local LLM ChromaDB Raspberry Pi 5

Phoenix-OS

[/Phoenix-OS](#)

A custom **Kali Linux ARM64** operating-system image for the Raspberry Pi 5, built with shell/Python automation, systemd service configuration, and **one-command build-and-flash** deployment. Demonstrates hands-on OS configuration, scripting, and hardware integration.

Bash Python Linux systemd ARM64

TheHackersMasterGuide

[/TheHackersMasterGuide](#)

A **seven-volume, ~143,000-word** technical reference on security operations — 53 chapters spanning offensive & defensive ops. Deep technical knowledge plus clear documentation of complex material, and the knowledge corpus powering ERRORS-Ultimate.

Technical Writing Purple Team Documentation

juice-shop-portfolio

[/juice-shop-portfolio](#)

Independently reproducible solutions to **92 of 177 challenges (82.1%)** in OWASP Juice Shop, with Python scripts that regenerate every result. Methodical troubleshooting and web-application security fundamentals — injection, XSS, broken auth, and more.

Web App Security OWASP Python

educational-keylogger-lab

[/educational-keylogger-lab](#)

A **controlled Python lab** for understanding how keystroke capture works — and, more importantly, how to detect and defend against it. Endpoint-security and malware-awareness fundamentals, built strictly for legal, lab-scoped learning.

Python Endpoint Security Malware Awareness

Flipper-Zero-BadUSB

[/Flipper-Zero-BadUSB](#)

Hands-on research into **USB/HID attack vectors** using the Flipper Zero platform — exploring how rogue USB devices interact with host machines and how IT teams can mitigate physical-access risk to organizational devices.

Hardware Security HID Flipper Zero

06 Authored Works

The Hacker's Master Guide

7 volumes · 53 chapters · ~143,000 words

Flagship multi-volume purple-team security textbook spanning offensive and defensive operations — and the knowledge corpus behind ERRORS-Ultimate.

The OpSec Master Guide

Operational-security reference

A comprehensive guide to operational security — anonymity, evasion, and operator tradecraft for legal, authorized engagements.

07 Experience & Education

Network Administrator

National Cooling Products

- ▶ Administer enterprise-scale network infrastructure supporting hundreds of endpoints — availability, performance, and security.
- ▶ Manage user accounts, access controls, and device provisioning; troubleshoot connectivity, hardware, and software for a large user base.
- ▶ Apply security hardening & patch management — host firewalls, intrusion prevention (fail2ban), controlled update workflows.
- ▶ Monitor systems and respond to incidents; document configurations and resolutions for repeatable operations.

B.S. Cybersecurity

Oklahoma State University — Oklahoma City

- ▶ Expected graduation: December 2027 · GPA 3.0
